

# KINGDOM PRODUCTS

Use this chart as a guideline only. This color chart is for representation of the colors only. The colors may not exactly represent the final color of your project. The volume of water and the addition of admixtures and other additives will all have an effect on the mix design and therefore effect the final color. We always recommend that a test sample be done and approved prior to the start of the job to ensure the accuracy of the desired color.

## FAST MELT PIGMENT SYSTEM - For use with Kingdom Products dry powder materials

Three calibrated measuring scoops are included.

10 cc scoop  
"tweaker cup"

60 cc scoop for  
20 to 30 lb pails

100 cc scoop for  
50 to 60 lb bags

Use the 60 cc scoop for our 20 to 30 lb units of material and use the 100 cc scoop for our 50 to 60 lb units of material. A "tweaker cup" (10 cc scoop) is also provided to allow the installer to give an extra shot of any color. These pigments can also be used in combination with each other to create an endless number of color options.

Use 1 to 8 scoops of pigment per 20 to 60 lbs of material

- 60 cc scoop for 20 to 30 lb pails
- 100 cc scoop for 50 to 60 lb bags
- 10 cc scoop for minor color adjustments

Spoon the pigment into your measuring scoop and scrape a knife across the top of the measuring cup to level the pigment. DO NOT pack the pigment into the cup.

\*When using with Rosalia SuperFine Crema, add the pigment into the mix water and then screen the pigmented liquid through a cheesecloth or paint strainer to remove larger fines before adding your powdered material.

\*\*Due to the nature of the Imprinta, colors will be slightly grayer, more muted.
